

# SprayCheck

2023 June

**Tool Mate "SprayCheck" kit uses technology of portable Ultra high intensity UV light with food grade water washable fluorescent dye.**

**This method is considered far superior than spray cards, by NSW department of Primary Industries.**

**The instant fluorescent indication of the droplets showcases your high quality equipment by letting your customers see the spray coverage, spray efficiency immediately on application. Not effected by humidity.**

**The indication of the droplets also provides very important information for spray calibration and nozzle selection.**

**Tool Mate "SprayCheck" has options of portable close up spot check and larger canopy check to suit different crops.**

**Selective equipment rental is available.**
